

§4b.623 Distribution system. (a) The distribution system shall be considered to include all distribution busses, their associated feeders, and control and protective devices.

(b) Individual distribution systems shall be designed to insure that essential load circuits can be supplied in the event of reasonably probable faults or open circuits.

(c) Where two independent sources of electrical power for particular equipment or systems are required by the Civil Air Regulations, their electrical energy supply shall be assured.

Note: Various means may be used to assure a supply such as duplicate electrical equipment, throw-over switching and multichannel or loop circuits separately routed.
